(54) Title: METHOD AND APPARATUS FOR PROCESSING MULTIMEDIA SCRIPT

(57) Abstract: The present invention provides method and apparatus for dynamically updating and processing the multimedia script (510) for network servers (110). By replacing a responding software module which responds to an activating instruction (m, m1, m2, ...) with the time-based responding software module (520, 530), the playing of the specific multimedia element no longer depends on the activating instructions (m, m1, m2) frequently inserted by program editors to be activated, but is automatically activated based on the specific time. The method and the device provided by the present invention reduces the redundant information of a multimedia playing system, avoids the situation that the corresponding multimedia element can not be displayed because the user terminal (130) misses receiving the activating instruction (m, m1, m2, ...).
